COMPENG 2SH4 Project – Statement of Contribution

Your Group Number   group

Your Name   Evan Chadwick

Your Team Member's Name   Keyon Farshad

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

I worked on iterations 1B and 2B. We collaborated on the snake features roughly equally. Each helping each other throughout. As for the bonus, I took the lead and completed it.

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.

My partner worked on iterations 1A and 2A. He collaboratively worked on the last three features.

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

This isn't my first collaborated software project but still further development my preconceived notions of how group coding projects should function. Firstly, I brought in the knowledge of integrating early and often to guarantee that classes work together. Additionally, there was a small hiccup because the robustness of a certain section of the code wasn't rigourstly tested which caused some wasted time. In future projects I now know the isolated sections must completely function before integration. Lastly, comparing to my older experiences with coding, the project workflow significantly cut down development time and made the final product clean and clear.
